

Integrated Collaborative School Portals

ePortalis simplifies your school community contents by bringing together one easy to use interface customised for students, staff and parents. It is a highly flexible and scalable system and can integrate with most of your existing school systems.

Solutions

Our portal solution delivers user friendly navigation and management for your school portal. There are 3 flexible options for your school portal:

Cloud Model – A white label solution that can be setup within minutes and hosted with AWS providing 256-bit AES encryption for your data. The cloud model minimises your operational overheads by eliminating hardware, software and other associated costs.

Hybrid Model – We understand the complexity of school systems with data spread across multiple systems. The hybrid model allows you to use the cloud model and display relevant information from your in-house systems on to the portal through means of integration. With SSO enabled, it eliminates the need to remember passwords for accessing these systems.

Bespoke Model – A fully customised portal hosted within your infrastructure and integrated with your systems. It provides enhanced flexibility like having your own design and features based on your specific requirements. Many additional features like SSO, customised application, and others can be included based on the requirements.

ePortalis Integrations

Our APIs makes the portal seamlessly integrate with most of your existing IT systems.

Contents from other Website – The portal can display contents from external sources by simply adding a URL link on any page. It provides a great way to display information such as events calendar or web feeds that you already have on your website.

Timetabler or Other Timetable Software

– The software can seamlessly integrate with your timetable software. The timetable integration allows students and teachers timetable to be displayed on their portal dashboard as well as viewed on the calendar.

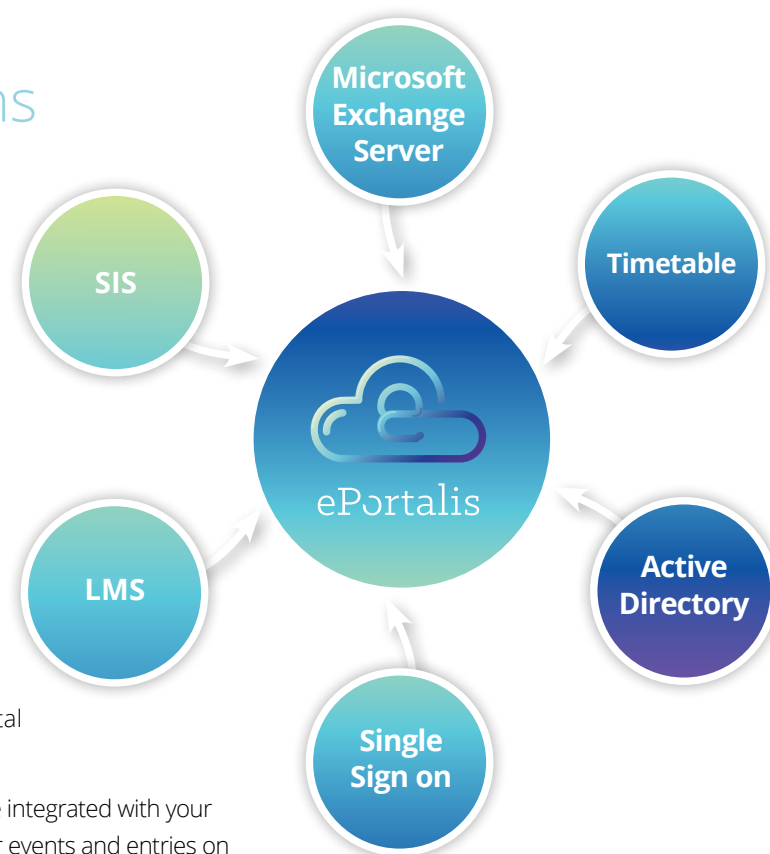

MS Exchange Server – The portal calendar can be integrated with your existing Microsoft Exchange Server so that calendar events and entries on both calendars (portal calendar and Outlook calendar) remain in sync.

Google Calendar – Similar to MS Outlook calendar, the ePortalis calendar integrates with Google calendar where both these calendars remain in sync with each other.

Single Sign-On – Allows you to provide single login credential for multiple systems. It support CAS (Central Authentication Service), NTLM (Microsoft protocol used for authentication through Microsoft IE when authenticating to a workgroup), Kerberos, OpenID, Atlassian Crowd, OpenSSO, SAML, and others.

SIS – MAZE, Synergetic, TASS and others.

Others – LDAP, Active Directory, Accelerus, SEQTA, SharePoint, and many more.

Standard Features and Applications

ePortalis is built to cater the everyday requirements for your school. It is packed with features to help you manage your portal with greater flexibility and have a portal relevant to your school requirements.

Pages – Add and manage unlimited pages including any number of sub-pages.

Permissions – Permissions can be set on any page, content or application so that relevant page, content and application are accessible and managed by users with privilege.

WYSIWYG Editor – A complete HTML editor that allows you to modify fonts, add colour, insert images, source and much more.

Web Content Management – Publish contents including text, images, videos on any of your portal pages to keep your site fresh at all times.

Responsive Design – Never worry about having a separate site or a mobile app to manage. ePortalis software is responsive to any device including tablet and mobile devices and is compatible with modern browsers.

Customisation – Let your users customise any page or sections of pages and let them view the page as they like by allowing them to assign applications based on their preference.

Announcements – An efficient way to periodically communicate important information to your users. Target announcements to different groups of users.

Blogs – Run list of short articles for your school users (students, staff, teachers or parents) to which users with permissions can attach threaded comments. It also allows you to view all entries from multiple bloggers on one page, giving further visibility to blog entries.

Bookmarks – Add value to your portal's usability by collecting and managing URLs in the portal. The bookmarks application can be added to any page on the portal. Both external sites and internal pages including documents can be bookmarked and links can be tailored to specific groups of users.

Chat – A convenient way to send instant messages for logged in users to your portal. It displays logged in users, their status and any chat the logged-in user has open.

Documents and Media – Store any kind of files online including Microsoft Word, PowerPoint, PDF, images, audio and video using same type of structure that you use to store file locally. You can view and read the documents on-the-go without the need to download them.

Media Gallery – Easily display galleries of images on your portal. You can manage and organise them in folders and make them accessible to specific groups of users. The gallery can be also viewed as a slideshow.

Latest News – Create custom news items and make it readily available to your users. Integrated WYSIWYG editor makes it more fun creating those within minutes.

Notifications – View all your notification, from calendar events to blogs comments and school announcements, at one place.

Polls – Find answers to questions in a quick and easy way to better understand your users. You can create multiple choice polls that keeps track of the votes and display results on the page.

Quick Links – A quick and easy way to provide links to almost anything from exam timetables to parent teacher bookings or any other application from your portal.

School Directory – It lists all the portal users including staff, students and parents. It allows you to search for a particular user or sort them based on groups.

Shopping Cart – Sell books, uniforms and others with our built-in shopping cart. It accepts PayPal and allows you to choose the credit cards you accepts. You can organise inventory and search to quickly find items. The customers receives an email when their transactions are processed.

Stats and Auditing – Track activities of portal users such as login and logoff times to help you see which users were logged in and for how long.

Wikis – Helps you build a repository of information. It allows users with permissions to create and edit documents and link them to each other.

Competitive Features

A highly efficient portal catering the needs for today and tomorrow.

CMS and DMS – ePortal is a full Content Management System and Document Management System. It makes managing contents and creating new contents a breeze.

Multiple Campuses – The portal caters for multiple campuses with users redirected to the relevant campus page. Contents can either be specific to a campus or shared between the campuses. This helps to avoid multiple entries for shared contents.

Multi Language Support – Do you have campuses, students or agents in other countries? Would you want the contents appear to those in their localised language? ePortal supports over 35 different languages and most importantly you do not need to know any additional language. Once you have selected the language you want the contents to appear in ePortal automatically converts it.

Scheduling – Customise the date and time your content or application publishes and expires on any of the portal pages. This is an excellent way to keep your site current and free from outdated information by scheduling items like texts, photos, exam timetables or parent-teacher interviews.

Drag and Drop – Add any application on any portal page by simply dragging and dropping the application on a page.

Workflows for Approval or Review Process – Whether it's booking a room or simply adding contents to a page or submitting forms online, workflows can be added to any level ensuring proper processes are structured and your compliance requirements are met.

Booking System – The booking systems allows you to book a room, sports ground or event halls. It caters the requirement of approval processes. Recurring bookings, bookings without the need of approval process on selected rooms and option to add bookings to calendar are provided.

Calendar – All-in-one calendar providing school, group, personal and timetable information to plan your day. It allows you to manage meetings, appointments and configure email or reminder notifications. With integration to your Microsoft Exchange, Google Calendar, iCal or other third party calendar it remains in sync to provide further accessibility.

Email – Interact with your email using an easy to use ubiquitous web interface. It supports the IMAP protocol and can also connect to a mail account provided by Google.

Access Documents and Folders from your Desktop – The Document and Media library provides WebDAV integration. This allows you to edit and manage documents, media and folders from your own computer file manager.

Documents, Media and Folders Sync – The portal sync automatically synchronises files and documents across all configured Portal Sync clients making it available for viewing or editing in the native environment. These can be edited without physically logging in to the portal providing greater flexibility and save time.

Weekly Bulletin – The portal is configured to allow you to send bulletins or newsletters to target audiences. eNewsletters are a perfect way of engaging with parents or other member of your community.
